FIRST CONGRESS FOCUSING ON CLINICAL APPLICATION, EVALUATION AND INTEGRATION OF E-HEALTH AND TELEMEDICINE IN TODAY’S HEALTHCARE SYSTEMS!

Like no other meeting the e-Cardiology & e-Health Congress brings together international experts of this emerging field, with renowned expertise in research, application and integration of e-Health and telemedicine.

The 2014 e-Cardiology & e-Health Congress takes place at the Congress Center Kursaal Bern in Switzerland and is organized by the Cardiovascular Prevention, Rehabilitation & Sports Medicine | University Hospital, Inselspital Bern.

PROGRAM, REGISTRATION AND FURTHER INFORMATION AT:
www.e-cardiohealth.org

THIS CONGRESS IS OFFICIALLY ENDORSED BY:
CONGRESS OBJECTIVES

e-Health and telemedicine have a particular potential in cardiovascular disease prevention as well as in the long-term care management of patients with chronic diseases. They will rapidly evolve and become an important component of today’s medical care. Their great potential to lower health care costs by reducing the burden of disease, the risk of complications, hospitalizations, recurrent events and premature death should be exploited to the full. Our goal is to contribute to finding solutions which improve the quality of life and regain, maintain or enhance independence of our patients.

TARGET AUDIENCE

This congress brings together health professionals such as physicians, physiotherapists & nurses, exercise & sports scientists, experts of universities and research institutes, representatives of health and government authorities, industry representatives and service providers as well as individuals who are interested to learn more about the growing field of e-Health and telemedicine.

KEY TOPICS

The program will provide opportunities to reflect on past achievements and consider the challenges ahead; How can we contribute to the development of e-Health and telemedicine in cardiovascular and chronic diseases? Always with a focus on clinical application and implementation. A distinguished faculty of international experts and opinion leaders will address and discuss among other the following topics:

• New Developments in Remote Data Aquisition and Monitoring with and without Devices
• Telemedicine and Mobile / Online Health Applications
• Clinical Evidence for Telemedicine in Heart Failure
• Telemedicine in Chronic Disease Management
• Telerehabilitation in Chronic Diseases
• Connectivity, Common Platforms and Data Security
• Business Cases, Cost Efficiency and Reimbursement of e-Health and Telemedicine
